

Sign Making Instructions

1. Find a local sign company in your community (i.e. Sign-O-Rama) and purchase a sheet of corrugated plastic board (10 mm). A sheet of corrugated plastic board is usually 4' X 8' and can cost between \$10-20 per sheet. The sign company may cut you a 3' X 4' sheet at an additional charge.
2. Before applying the self-adhesive vinyl sign to the corrugated plastic board, you must clean the corrugated plastic board and remove any dirt.
3. Once the corrugated plastic board is clean, find an old Windex or window cleaner bottle that is half full. Add water to the Windex or window cleaner bottle and make sure the bottle contains 50% water and 50% Windex/window cleaner.
4. After water is added, spray the Windex/window cleaner evenly on the corrugated plastic board. Make sure that the entire surface is wet.
5. Peel handheld sign sticker from back paper. Apply the sign to the corrugated plastic board. Center the sign.
6. After the sign is centered and applied to the corrugated plastic board, make a squeegee from a scrap piece of cardboard. Bend the piece of cardboard to make the squeegee. Use the squeegee to flatten the sign wrinkles and push out the Windex/window cleaner that is under the sign. Make sure that the entire Windex/window cleaner is removed from the corrugated plastic board before allowing the sign to dry.
7. Once the entire Windex/window cleaner is removed from the corrugated plastic board, let the sign dry overnight or for 24hrs. Place books or heavy objects on the sign, especially at the edges, to ensure that the sign sticks to the corrugated plastic board.
8. After the sign is dry, go to your local high school, abortion clinic, or college campus to educate your community about what abortion does to preborn babies.
